

Dr. F.P. (Filip) Neele
CCS scientist
Applied Geosciences

Filip Neele is the lead scientist on CO₂ transport and storage on TNO's subsurface team in Utrecht. He holds a PhD in seismology from Utrecht University. He has been active in the field of CCS since 2006 and has set up and led projects that cover a wide range of topics in CO₂ transport and storage, such as regional screening studies for CO₂ storage capacity and detailed storage feasibility assessments. He has a keen interest in CCS network development, in the role that ship transport can play and in the evolution of multi-asset storage networks. He is currently working on effective and efficient approaches to monitoring operational CO₂ projects.
