

Energy security in clean energy transitions: Insights from the World Energy Outlook 2022

Yasmine Arsalane

World Energy Outlook analyst, International Energy Agency (IEA)

■要旨／Abstract

The *World Energy Outlook 2022* provides a comprehensive view of how the global energy system could develop in the coming decades. With the world in the midst of the first global energy crisis – triggered by Russia's invasion of Ukraine – the new Outlook provides indispensable analysis and insights on the implications of this profound and ongoing shock to energy systems across the globe. Will the crisis be a setback for clean energy transitions or a catalyst for greater action? How might government responses shape energy markets? Which energy security risks lie ahead on the path to net zero emissions?
