

Energy security in clean energy transitions: Insights from the World Energy Outlook 2023

The *World Energy Outlook 2023* provides in-depth analysis and strategic insights into every aspect of the global energy system. Against a backdrop of geopolitical tensions and fragile energy markets, this year's report explores how structural shifts in economies and in energy use are shifting the way that the world meets rising demand for energy. This *Outlook* assesses the evolving nature of energy security fifty years after the foundation of the IEA, looking at the implications of today's energy trends.

In this presentation, we also present the latest assessment of global energy-related CO₂ emissions in 2023 and how expansion of technologies such as solar, wind and EVs have tempered this growth.
